

Tuukka Petäjä

Currently at:

Division of Atmospheric Sciences
Department of Physical Sciences
University of Helsinki

Starting a post-doc period (fall 2007) in

Photochemical Oxidation/Products (POP) group
Photo-oxidation and Products Group
Atmospheric Chemistry Division
National Center of Atmospheric Research

Research interests

- Atmospheric sub-micron aerosol measurements!
 - Thesis title: Measurements of formation, growth, hygroscopicity and volatility of atmospheric ultrafine particles (2006)
- Formation of atmospheric aerosol particles (mechanism? Participating compounds)
- Subsequent growth (how hygroscopicity changes over time? Volatility?)
- Role of sulphuric acid and organics in all this?
